

## **Bitesize Careers - Where physics study can take you**

### **Routes into physics occupations**

This short section begins with two slides that graphics from the [IOP's Limitless campaign](#)<sup>1</sup>. The first revisits the demand for physics and the second then summarise routes into physics from school.

This short summary can be used with pupils but you might wish to use the more detailed slide '**Routes from school into physics occupations**'. This slide is based on materials developed by EngineeringUK through their Tomorrows Engineers programme and provides more detail about physics options available to pupils at age 14, 16 and 18 and some of the decisions that need to be made at these key points.

The slide might be presented to pupils or their parents or used with other teachers who might not be aware of the routes into physics available.
